

Portfolio - Marking Rubric (100 marks)

Functionality - Learning Outcome 1 (50 marks)

Breakout (15 marks)

Fundamental Mechanics (7 marks)

Band	Marks	Criteria
A	5.6-7	All fundamental mechanics fully implemented and functional. Main menu, paddle movement (A/D keys via Unity input system), ball movement, collisions, 10x4 brick grid, brick health, score system with display, 3-life system with display, top 10 high scores, sound effects for all required events, pause/resume (P key) and end game menu all work correctly and cohesively. Game is published to itch.io.
B	4.5-5.5	Most fundamental mechanics implemented and functional with minor issues. Majority of mechanics work correctly. Game is published to itch.io with most features accessible.
C	3.5-4.4	Core mechanics present but some are incomplete or buggy. Paddle, ball, collisions and basic score/lives system work, but some features such as high scores, sound effects or menus may be missing or partially functional. Game may be published to itch.io.
D/E	0-3.4	Many fundamental mechanics missing or non-functional. Game is unplayable or fails to demonstrate the required features. May not be published to itch.io.

Tier 2 Mechanics (3 marks)

Band	Marks	Criteria
A	2.4-3	All three selected Tier 2 mechanics fully implemented and working seamlessly within the game. Mechanics enhance gameplay and are well-integrated.
B	2-2.3	Three Tier 2 mechanics implemented with minor issues. Mechanics are functional and mostly integrated well with the rest of the game.
C	1.5-1.9	Fewer than three Tier 2 mechanics implemented, or three present but with notable bugs or poor integration.
D/E	0-1.4	Fewer than two Tier 2 mechanics implemented, or mechanics are largely non-functional.

Tier 3 Mechanics (3 marks)

Band	Marks	Criteria
------	-------	----------

Band	Marks	Criteria
A	2.4-3	Both selected Tier 3 mechanics fully implemented and working seamlessly. Mechanics add meaningful depth to the game and are well-integrated.
B	2-2.3	Both Tier 3 mechanics implemented with minor issues. Mechanics are functional and reasonably integrated.
C	1.5-1.9	Only one Tier 3 mechanic fully implemented, or both present but with significant issues or poor integration.
D/E	0-1.4	Tier 3 mechanics largely missing or non-functional.

Your Own Mechanics (2 marks)

Band	Marks	Criteria
A	1.6-2	Three original mechanics implemented that are clearly distinct from all listed mechanics. Each mechanic adds meaningful gameplay value and is well-integrated.
B	1.3-1.5	Three original mechanics present with minor issues, or two fully implemented. Mechanics are generally distinct and add value.
C	1-1.2	Fewer than three original mechanics, or mechanics closely resemble listed ones. Some integration issues.
D/E	0-0.9	Fewer than two original mechanics implemented, or mechanics are not meaningfully distinct or functional.

RogueLike (20 marks)

Fundamental Mechanics (10 marks)

Band	Marks	Criteria
A	8-10	All fundamental mechanics fully implemented and functional. Main menu, player movement (Unity input system), enemy movement (in-range tracking), combat, health system with display for player and enemies, score system with display, pickup system, top 10 high scores, sound effects for all required events, pause/resume (P key) and end game menu all work correctly. Game is published to itch.io.
B	6.5-7.9	Most fundamental mechanics implemented and functional with minor issues. Core gameplay loop is intact. Game is published to itch.io.
C	5-6.4	Core mechanics present but several are incomplete or buggy. Player/enemy movement and combat work, but features such as pickups, high scores, sound effects or menus may be missing or partially functional. Game may be published to itch.io.
D/E	0-4.9	Many fundamental mechanics missing or non-functional. Game is unplayable or fails to demonstrate the required features. May not be published to itch.io.

Tier 2 Mechanics (4 marks)

Band	Marks	Criteria
A	3.2-4	All three selected Tier 2 mechanics fully implemented and working seamlessly within the game. Mechanics enhance gameplay and are well-integrated.
B	2.6-3.1	Three Tier 2 mechanics implemented with minor issues. Mechanics are functional and mostly integrated well.
C	2-2.5	Fewer than three Tier 2 mechanics implemented, or three present but with notable bugs or poor integration.
D/E	0-1.9	Fewer than two Tier 2 mechanics implemented, or mechanics are largely non-functional.

Tier 3 Mechanics (3 marks)

Band	Marks	Criteria
A	2.4-3	Both selected Tier 3 mechanics fully implemented and working seamlessly. Mechanics add meaningful depth and are well-integrated.
B	2-2.3	Both Tier 3 mechanics implemented with minor issues. Mechanics are functional and reasonably integrated.
C	1.5-1.9	Only one Tier 3 mechanic fully implemented, or both present but with significant issues or poor integration.
D/E	0-1.4	Tier 3 mechanics largely missing or non-functional.

Your Own Mechanics (3 marks)

Band	Marks	Criteria
A	2.4-3	Four original mechanics implemented that are clearly distinct from all listed mechanics. Each mechanic adds meaningful gameplay value and is well-integrated.
B	2-2.3	Four original mechanics present with minor issues, or three fully implemented. Mechanics are generally distinct and add value.
C	1.5-1.9	Fewer than four original mechanics, or mechanics closely resemble listed ones. Some integration issues.
D/E	0-1.4	Fewer than two original mechanics implemented, or mechanics are not meaningfully distinct or functional.

Platformer (15 marks)

Fundamental Mechanics (7 marks)

Band	Marks	Criteria
A	5.6-7	All fundamental mechanics fully implemented and functional. Main menu, player movement (A/D/Space via Unity input system), gravity, collisions, platform variety, enemy patrol and damage, score system with display, 3-life system with display, top 10 high scores, sound effects for all required events, pause/resume (P key) and end game menu all work correctly. Game is published to itch.io.
B	4.5-5.5	Most fundamental mechanics implemented and functional with minor issues. Core gameplay loop is intact. Game is published to itch.io with most features accessible.
C	3.5-4.4	Core mechanics present but some are incomplete or buggy. Movement, gravity, collisions and basic score/lives system work, but features such as enemy AI, high scores, sound effects or menus may be missing or partially functional. Game may be published to itch.io.
D/E	0-3.4	Many fundamental mechanics missing or non-functional. Game is unplayable or fails to demonstrate the required features. May not be published to itch.io.

Tier 2 Mechanics (3 marks)

Band	Marks	Criteria
A	2.4-3	All three selected Tier 2 mechanics fully implemented and working seamlessly within the game. Mechanics enhance gameplay and are well-integrated.
B	2-2.3	Three Tier 2 mechanics implemented with minor issues. Mechanics are functional and mostly integrated well.
C	1.5-1.9	Fewer than three Tier 2 mechanics implemented, or three present but with notable bugs or poor integration.
D/E	0-1.4	Fewer than two Tier 2 mechanics implemented, or mechanics are largely non-functional.

Tier 3 Mechanics (3 marks)

Band	Marks	Criteria
A	2.4-3	Both selected Tier 3 mechanics fully implemented and working seamlessly. Mechanics add meaningful depth and are well-integrated.
B	2-2.3	Both Tier 3 mechanics implemented with minor issues. Mechanics are functional and reasonably integrated.
C	1.5-1.9	Only one Tier 3 mechanic fully implemented, or both present but with significant issues or poor integration.
D/E	0-1.4	Tier 3 mechanics largely missing or non-functional.

Your Own Mechanics (2 marks)

Band	Marks	Criteria
A	1.6-2	Three original mechanics implemented that are clearly distinct from all listed mechanics. Each mechanic adds meaningful gameplay value and is well-integrated.
B	1.3-1.5	Three original mechanics present with minor issues, or two fully implemented. Mechanics are generally distinct and add value.
C	1-1.2	Fewer than three original mechanics, or mechanics closely resemble listed ones. Some integration issues.
D/E	0-0.9	Fewer than two original mechanics implemented, or mechanics are not meaningfully distinct or functional.

Code Quality and Best Practices - Learning Outcome 1 (40 marks)

Project Structure (8 marks)

Band	Marks	Criteria
A	6.4-8	Excellent project structure across all three games. Clear and logical organisation with well-defined separation of concerns. Scripts, assets, scenes and prefabs are meaningfully separated and named. Code is highly modular, promoting reusability and maintainability. Easy to navigate and follows Unity best practices.
B	5.2-6.3	Good project structure with separation of concerns implemented for most games. Organisation is logical with minor inconsistencies. Code is reasonably modular with some reusable components. Generally follows best practices.
C	4-5.1	Basic structure present but separation of concerns is inconsistent. Some mixing of responsibilities within scripts or scenes. Limited modularity. Organisation could be significantly improved across one or more games.
D/E	0-3.9	Poor or no consistent project structure. Little to no separation of concerns. Code is monolithic and difficult to navigate across one or more games.

Naming Conventions (6 marks)

Band	Marks	Criteria
A	4.8-6	All file, class, method, variable, constant and property names are clear, descriptive and consistent across all three games. Naming conventions are applied correctly and uniformly throughout the codebase. Names immediately convey purpose and intent.
B	3.9-4.7	Names are generally clear and descriptive with minor inconsistencies. Naming conventions are followed in most cases across the codebase.
C	3-3.8	Naming is inconsistent or unclear in places. Some names are not descriptive or do not follow a consistent convention. Issues spread across one or more games.

Band	Marks	Criteria
D/E	0-2.9	Poor naming conventions throughout. Many names are unclear, abbreviated or inconsistent. Makes the codebase difficult to understand.

Documentation and Comments (10 marks)

Band	Marks	Criteria
A	8-10	Codebase is comprehensively documented using the XML documentation format across all three games. All classes and public methods have XML doc comments. Complex logic is clearly explained with inline comments. Comments add genuine value and clarify intent rather than restating code.
B	6.5-7.9	Good documentation coverage using XML format for most classes and methods. Complex logic is mostly commented. Minor gaps in documentation across the codebase.
C	5-6.4	Basic documentation present but inconsistent. XML format used in some places but not throughout. Some complex logic is unexplained. One or more games may have limited documentation.
D/E	0-4.9	Little or no documentation. XML format largely absent. Code is difficult to understand without explanation.

Code Formatting (6 marks)

Band	Marks	Criteria
A	4.8-6	Consistent indentation and spacing used throughout all three games. Proper indentation for all code blocks, consistent brace formatting and appropriate blank lines between sections. Code is clean and highly readable.
B	3.9-4.7	Formatting is consistent in most areas with minor lapses. Indentation and spacing are generally correct. Code is readable.
C	3-3.8	Formatting is inconsistent across the codebase. Some indentation errors, inconsistent brace styles or missing blank lines. Readability is impacted.
D/E	0-2.9	Little or no consistent formatting. Indentation, spacing and structure are irregular throughout. Code is difficult to read.

Dead Code (4 marks)

Band	Marks	Criteria
A	3.2-4	No unused or redundant files, classes, methods, variables, constants or properties across all three games. Codebase is clean and contains only what is necessary.

Band	Marks	Criteria
B	2.6-3.1	Minimal dead code present. A few unused elements exist but do not significantly clutter the codebase.
C	2-2.5	Some dead code present across one or more games. Unused variables, commented-out blocks or redundant files are noticeable.
D/E	0-1.9	Significant dead code throughout the codebase. Unused classes, methods or files are widespread and create confusion.

Performance and Scalability (6 marks)

Band	Marks	Criteria
A	4.8-6	Code is well-optimised across all three games. Efficient algorithms and appropriate data structures are used throughout. No obvious performance bottlenecks. Unity best practices (e.g., caching component references, avoiding per-frame allocations) consistently applied.
B	3.9-4.7	Code is generally efficient with minor performance concerns. Most Unity best practices applied. Some suboptimal patterns present but not significantly impactful.
C	3-3.8	Basic functionality is achieved but with noticeable performance issues or inefficient approaches. Some Unity best practices applied inconsistently.
D/E	0-2.9	Code has significant performance issues. Inefficient algorithms or poor data structures used. Little evidence of performance awareness or Unity best practices.

Documentation and Git Usage - Learning Outcome 1 (5 marks)

GitHub Issues (2 marks)

Band	Marks	Criteria
A	1.6-2	Consistent and meaningful use of GitHub Issues throughout the full duration of the assessment. Issues are well-defined, used to organise and prioritise development work and shown to the course lecturer both before development and at the end of each week.
B	1.3-1.5	Good use of GitHub Issues with mostly consistent engagement. Issues are present and generally reflect development progress. Shown at most required checkpoints.
C	1-1.2	Basic use of GitHub Issues but inconsistent. Some issues created but do not clearly reflect development priorities or were not shown at required checkpoints.
D/E	0-0.9	Little or no use of GitHub Issues. Development work is not tracked or organised through issues.

README.md (1 mark)

Band	Marks	Criteria
A	0.8-1	README.md is complete and well-formatted. Includes working itch.io URLs for all three games and a clear list of implemented mechanics for each game. Any AI tool usage or external code sources are fully acknowledged with prompts and descriptions.
B	0.7	README.md covers all required sections with minor omissions. itch.io URLs and mechanic lists are present. AI/external code acknowledgement present but may lack detail.
C	0.5-0.6	README.md is incomplete. Some URLs or mechanic lists are missing. AI/external code acknowledgement may be absent or insufficient.
D/E	0-0.4	README.md is largely absent or missing critical sections. itch.io URLs and/or mechanics lists not provided.

.gitignore (1 mark)

Band	Marks	Criteria
A	0.8-1	A correct Unity .gitignore is present and based on the provided resource. No unnecessary Unity-generated files are committed to the repository.
B	0.7	.gitignore is present and functional with minor omissions. Most unnecessary files are excluded.
C	0.5-0.6	.gitignore is present but incomplete or not based on the Unity template. Some generated files are committed unnecessarily.
D/E	0-0.4	.gitignore is missing or incorrect. Large numbers of generated Unity files are committed to the repository.

Git Commit Messages (1 mark)

Band	Marks	Criteria
A	0.8-1	Commit messages are clear, descriptive and consistently follow an appropriate naming convention. Each commit reflects a focused, meaningful change. Regular commits demonstrate ongoing development. No large, monolithic commits.
B	0.7	Commit messages are generally clear and follow a naming convention with minor inconsistencies. Commits are reasonably regular and focused.
C	0.5-0.6	Commit messages vary in quality. Some are vague or do not reflect the changes made. Commits may be infrequent or inconsistently sized.
D/E	0-0.4	Commit messages are unclear, missing or do not follow any convention. Very few commits or large monolithic commits indicate poor version control habits.
